Item 4 Advisory Business

Description of Firm
Rook Strategies Wealth Management, PLLC ("Rook Strategies" or "Investment Advisor") is a registered investment adviser based in Robstown, TX. We were formed on August 17, 2021 and are organized as a limited liability company under the laws of the State of Texas. Rook Strategies is owned by Benny A. Ynfante.

The following paragraphs describe our services and fees. Refer to the description of each investment advisory service listed below for information on how we tailor our advisory services to your individual needs. As used in this brochure, the words "we," "our," and "us" refer to Rook Strategies and the words "you," "your," and "client" refer to you as either a client or prospective client of our firm.

Portfolio Management Services
We offer discretionary portfolio management services primarily through our relationship with Orion Portfolio Solutions, LLC ("Orion"). Our investment advice is tailored to meet our clients' needs and investment objectives.

Orion provides a fee-based platform for investment advisors to develop their own model portfolios or utilize Orion's selected institutional portfolio strategists (the "Strategist Program"). For the Strategist Program, Orion retains third party investment managers that, with the exception of Brinker Capital Investments, LLC, are not affiliated with Orion ("Strategists"), to design and manage model portfolios that Rook Strategies utilizes to manage client assets.

The Strategist Program provides access to asset allocation models developed by Orion or the Strategists ("Strategist Models"). The Strategists regularly monitor the Strategist Models and are responsible for managing the model portfolios on behalf of Orion. However, the Strategists are not acting as your investment advisor, do not possess knowledge of your individual information or investment goals and objectives, and do not provide personalized investment advice to you. You remain the owner of all securities held in your account and have all ownership rights associated with these securities. Visit orionportfoliosolutions.com/strategists to review the investment managers Orion has available as Strategists.

Orion makes available Strategist Models of various risk profiles through its platform. It is up to you and Rook Strategies to select the most appropriate Strategist Model offered by the Strategist Program. You can elect to utilize multiple Strategist Models within a single custodial account, where each Strategist Model allocation is assigned to a unique subaccount or "sleeve". This structure is known as a unified managed account ("UMA"). Your account will be invested in accordance with the Strategist Model you select. Once you and Rook Strategies have selected a Strategist Model, Orion will provide trading, reporting and administrative services. When a Strategist suggests a transaction in any Strategist Model, Orion has the authority to conduct the necessary trading activity to reflect the transaction in your account, as outlined in the Terms of Services and Use Agreement you will complete with Orion. Please read that document carefully, as it contains important information on how your account will be managed. When opening an account with Orion, you will be required to consent to that agreement.

If a Strategist or Strategist Model is removed from the Strategist Program, Orion will notify Rook Strategies of the change and request that action be taken to reassign the account by a specified date. If no action is taken by you or Rook Strategies, Orion reserves the right to map your account to an alternative Strategist's Model.

Trading
Trading will occur through the brokerage account(s) you establish with a custodian, in most cases this will be Charles Schwab. Strategists will provide Orion with instructions to rebalance or reallocate the Strategist Models depending on their asset allocation philosophy or investment manager selection process. These adjustments to the asset allocations will result in transactions in your account. A minimum amount of five dollars per security is required on contributions and rebalance trades, and all Strategist Model allocations must contain a minimum 1% allocation to cash. For distributions, positions are redeemed pro-rata unless otherwise specified. Your Investment Advisor or you instruct Orion that your account will be invested in accordance with the Strategist Model as indicated on the New Account Application, Investment Direction Addendum, or other relevant Orion form and/or reassignment process. If the Strategist Model changes, Orion will rebalance your account to align it with the selected Strategist Model. Your Investment Advisor or you may instruct Orion to terminate the use of the Strategist Models at any time. You will receive notification of all transactions in your account in the form of an account statement provided by the custodian.

For Strategist Program strategies that invest in mutual funds, the custodians utilized by Orion charge Orion an asset based fee when clients invest in certain share classes. These share classes are known as transaction fee ("TF") mutual funds. Absent the asset based fee paid by Orion, you would be charged a transaction fee typically ranging from $25 to $75 for each purchase of shares of a TF mutual fund. Because Orion is charged a fee for using certain share classes, Orion has a conflict when determining which share class to utilize in a Strategist Program. To mitigate this conflict, Orion's policy is to use the cheapest share class that is available at all custodians where the strategy is available (regardless of whether Orion has to pay an asset based fee to the custodian). When selecting mutual funds and mutual fund share classes, Orion will not utilize mutual funds or mutual fund share classes that have short-term redemption fees or minimum investment requirements. For any mutual fund used in a strategy, it is possible that certain custodians may make available a cheaper share classes than the share classes used by Orion (because Orion uses the cheapest share class available at all custodians that Orion uses). If you invested in the same mutual fund directly at your custodian or if you used an advisory program from another adviser, you may be eligible for a cheaper share class. However, because some of the cheaper share classes are TF mutual funds, it is possible that you will incur transaction fees imposed by Charles Schwab. Currently there is no transacton fee charged.

Client Exclusions and Security Restrictions
To the extent you or your Investment Advisor place any restrictions or reject any changes to the Strategist Model, your account will no longer be managed in accordance with the Strategist Model and you or your Investment Advisor will be responsible for managing the account in a different manner. In such case, you will no longer be charged the Strategist Fee.
If you or your Investment Advisor decide that the Strategist Model no longer meets your investment needs, the account can be reassigned to a cash model or another type of Strategist Model. If you or your Investment Advisor want to reassign your holdings to an alternative Strategist Model, the trades will be included in the next trade file after the request has been received.

If you participate in our discretionary portfolio management services, we require you to grant us, Orion and the Strategist Manager discretionary authority to manage your account. Subject to a grant of discretionary authorization, we have the authority and responsibility to formulate investment strategies on your behalf. Discretionary authorization will allow us to determine the specific securities, and the amount of securities, to be purchased or sold for your account without obtaining your approval prior to each transaction.

You may limit our discretionary authority (for example, limiting the types of securities that can be purchased or sold for your account) by providing our firm with your restrictions and guidelines in writing. Restrictions must be approved by the selected Strategist Manager(s).

Financial Planning Services
We offer financial planning services which typically involve providing a variety of advisory services to clients regarding the management of their financial resources based upon an analysis of their individual needs. These services can range from broad-based financial planning to consultative or single subject planning. If you retain our firm for financial planning services, we will meet with you to gather information about your financial circumstances and objectives. We may also use financial planning software to determine your current financial position and to define and quantify your long-term goals and objectives. Once we specify those long-term objectives (both financial and non-financial), we will develop shorter-term, targeted objectives. Once we review and analyze the information you provide to our firm and the data derived from our financial planning software, we will deliver a written plan to you, designed to help you achieve your stated financial goals and objectives.

Financial plans are based on your financial situation at the time we present the plan to you, and on the financial information you provide to us. You must promptly notify our firm if your financial situation, goals, objectives, or needs change.

You are under no obligation to act on our financial planning recommendations. Should you choose to act on any of our recommendations, you are not obligated to implement the financial plan through any of our other investment advisory services. Moreover, you may act on our recommendations by placing securities transactions with any brokerage firm.

Financial Consulting Services
We offer financial consulting services that primarily involve advising clients on specific financial-related topics. The topics we address may include, but are not limited to, risk assessment/management, investment planning, financial organization, or financial decision making/negotiation.

For clients who have contracted for our financial consulting services, we offer asset allocation services. These services are tailored to meet our clients' needs and investment objectives. Once you have retained our firm for asset allocation services, we will gather information about your financial situation and objectives, and assist you in determining your investment goals, objectives, risk tolerance, and retirement plan time horizon. We will initially provide you with recommendations as to how to allocate your investments among categories of assets.

If you elect ongoing reviews as part of our financial consulting agreement, we will also review the portfolio information you provide on a periodic basis and provide you with recommendations to change your asset allocation in an effort to remain consistent with your stated financial objectives. You are free at all times to accept or reject any of our investment recommendations.

You are solely responsible for implementing our asset allocation recommendations. If you wish for us to manage your portfolio, you must enter into a portfolio management agreement with our firm and ongoing fees will be assessed based on that agreement.

Wrap Fee Programs
We do not serve as the sponsor or portfolio manager for any wrap fee program.

Types of Investments
We offer advice on equity securities, warrants, corporate debt securities, commercial paper, certificates of deposit, municipal securities, variable life insurance, variable annuities, mutual fund shares, United States government securities, options contracts on securities, private placements, money market funds, real estate, REITs, PIPEs, derivatives, structured products, ETFs, leveraged ETFs, digital assets, interests in partnerships investing in real estate and interests in partnerships investing in oil and gas interests.

Additionally, we may advise you on various types of investments based on your stated goals and objectives. We may also provide advice on any type of investment held in your portfolio at the inception of our advisory relationship.

Since our investment strategies and advice are based on each client's specific financial situation, the investment advice we provide to you may be different or conflicting with the advice we give to other clients regarding the same security or investment.

Assets Under Management
We are a newly registered investment adviser; therefore, as of the date of this brochure, we do not have any discretionary or non-discretionary assets under management.

Item 5 Fees and Compensation

Portfolio Management Services
Our annual fee for portfolio management services are negotiable and will range between 1%-2.5% based upon the complexity of assets in the client's portfolio and depending upon the type and complexity of the asset management services provided, as well as the level of administration requested either directly or assumed by the client. Assets in each of your account(s) are included in the fee assessment unless specifically identified in writing for exclusion.

Our annual portfolio management fee is billed and payable, monthly in arrears based on the average daily balance for the previous month. If your account was not opened for the entire month, then the fee will be pro-rated.

If the portfolio management agreement is executed at any time other than the first day of a calendar month, our fees will apply on a pro rata basis, which means that the advisory fee is payable in proportion to the number of days in the month for which you are a client. Our advisory fee is negotiable, depending on individual client circumstances.

Orion will combine the account values of family members living in the same household to determine the applicable advisory fee. For example, we may combine account values for you and your minor children, joint accounts with your spouse, and other types of related accounts. Combining account values will typically increase the asset total, which may result in your paying a reduced advisory fee.

We will deduct our fee directly from your account through the qualified custodian holding your funds and securities. We will deduct our advisory fee only when the following requirements are met:

- You provide our firm with written authorization permitting the fees to be paid directly from your account held by the qualified custodian;
- We send you an invoice showing the amount of the fee, the value of the assets on which the fee is based, the time period covered by the fee, and the specific manner in which the fee was calculated; and

- The qualified custodian agrees to send you a statement, at least quarterly, indicating all amounts disbursed from your account including the amount of the advisory fee paid directly to our firm.

We encourage you to reconcile our invoices with the statements you receive from the qualified custodian. If you find any inconsistent information between our invoice and the statement(s) you receive from the qualified custodian call our main office number located on the cover page of this brochure. The fee we collect will appear on your custodial statement, though the custodian does not determine whether the fee has been properly calculated.

You may terminate the portfolio management agreement upon 30 days written notice. You will incur a pro rata charge for services rendered prior to the termination of the portfolio management agreement, which means you will incur advisory fees only in proportion to the number of days in the month for which you are a client. If you have prepaid advisory fees that we have not yet earned, you will receive a prorated refund of those fees.

Fees for portfolio management services in the Strategist Program include Orion's administration fees which range from 0.45% to 0.08% (depending on account size) and Strategist fees (earned by the Strategist managers). Fees for portfolio management services also include our investment advisory fee. Your total portfolio management fees will be stated on your Agreement.

Orion's annual account maintenance fees are $25 for clients who elect to receive statements electronically and $50 for those that receive mailed statements, and they are deducted separately from your account(s). The account maintenance fees are waived for households with $400,000 or more in assets. Account maintenance fees are not shared with Rook Strategies.

You will also be charged miscellaneous fees associated with administrative services, such as processing wire or ACH transfers, check fees, low balance fees, asset transfers or overnight checks. Please contact your Investment Advisor for a list of these fees.

Termination Fees
The current Termination Fee imposed by Orion is $75 per account for full outgoing distributions or non-ACAT transfers. This fee is paid to Orion and not shared with Rook Strategies .

Fees for Additional Services
The fees discussed above do not cover certain charges associated with securities transactions in clients' accounts, including: (a) dealer markups, markdowns or spreads charged on transactions in over the counter securities; (b) costs relating to trading in certain foreign securities; (c) the internal charges and fees that may be imposed by any funds, (such as fund operating expenses, management fees, redemption fees, 12b-1 fees and other fees and expenses); (d) brokerage commissions or other charges imposed by broker dealers or entities other than the custodian if and when trades are cleared by another broker dealer; and (e) the charge to carry tax lot information on transferred mutual funds or other investment vehicles, postage and handling charges, returned check charges, transfer taxes; stock exchange fees or other fees mandated by law. Further information regarding charges and fees assessed by funds may be found in the appropriate prospectus or offering document.

Financial Planning, Financial Consulting, and Asset Allocation Services
We charge an hourly fee of $250-$500 for financial planning, financial consulting and asset allocation services, which is negotiable depending on the scope and complexity of the plan, your situation, and your financial objectives. Our consulting fees are due and payable in advance of services being

rendered. An estimate of the total time/cost will be determined at the start of the advisory relationship. In limited circumstances, the cost/time could potentially exceed the initial estimate. In such cases, we will notify you and request that you approve the additional fee.

We will provide you an invoice for fees due for financial planning, financial consulting and asset allocation services. Fees will be due within 15 days of our invoice date. We will not require prepayment of a fee more than six months in advance and in excess of $500. At our discretion, we may offset our financial planning fees to the extent you implement the financial plan through our Portfolio Management Service. Fees will typically be billed 50% when the Agreement is signed with the balance due upon delivery of the financial plan or other services as outlined in the Agreement.

You may terminate the financial planning agreement upon 30 days written notice to our firm. If you have pre-paid financial planning fees that we have not yet earned, you will receive a prorated refund of those fees.

Additional Fees and Expenses
As part of our investment advisory services to you, we may invest, or recommend that you invest, in mutual funds and exchange traded funds. The fees that you pay to our firm for investment advisory services are separate and distinct from the fees and expenses charged by mutual funds or exchange traded funds (described in each fund's prospectus) to their shareholders. These fees will generally include a management fee and other fund expenses. You will also incur transaction charges and/or brokerage fees when purchasing or selling securities. These charges and fees are typically imposed by the broker-dealer or custodian through whom your account transactions are executed. We do not share in any portion of the brokerage fees/transaction charges imposed by the broker-dealer or custodian. To fully understand the total cost you will incur, you should review all the fees charged by mutual funds, exchange traded funds, our firm, and others. For information on our brokerage practices, refer to the *Brokerage Practices* section of this brochure.

Compensation for the Sale of Securities or Other Investment Products
Persons providing investment advice on behalf of our firm are licensed as independent insurance agents. These persons will earn commission-based compensation for selling insurance products, including insurance products they sell to you. Insurance commissions earned by these persons are separate and in addition to our advisory fees. This practice presents a conflict of interest because persons providing investment advice on behalf of our firm who are insurance agents have an incentive to recommend insurance products to you for the purpose of generating commissions rather than solely based on your needs. You are under no obligation, contractually or otherwise, to purchase insurance products through any person affiliated with our firm.

Item 6 Performance-Based Fees and Side-By-Side Management

We do not accept performance-based fees or participate in side-by-side management. Performance-based fees are fees that are based on a share of a capital gains or capital appreciation of a client's account. Side-by-side management refers to the practice of managing accounts that are charged performance-based fees while at the same time managing accounts that are not charged performance-based fees. Our fees are calculated as described in the *Fees and Compensation* section above, and are not charged on the basis of a share of capital gains upon, or capital appreciation of, the funds in your advisory account.

Item 7 Types of Clients

We offer investment advisory services to individuals, including high net worth individuals, and corporations or other businesses.

In general, we require a minimum of $10,000 to open and maintain an advisory account. At our discretion, we may waive this minimum account size. For example, we may waive the minimum if you appear to have significant potential for increasing your assets under our management.

We may also combine account values for you and your minor children, joint accounts with your spouse, and other types of related accounts to meet the stated minimum.

Item 8 Methods of Analysis, Investment Strategies and Risk of Loss

Our Methods of Analysis and Investment Strategies
We may use one or more of the following methods of analysis or investment strategies when providing investment advice to you:

Charting Analysis - involves the gathering and processing of price and volume pattern information for a particular security, sector, broad index or commodity. This price and volume pattern information is analyzed. The resulting pattern and correlation data is used to detect departures from expected performance and diversification and predict future price movements and trends.

> **Risk:** Our charting analysis may not accurately detect anomalies or predict future price movements. Current prices of securities may reflect all information known about the security and day-to-day changes in market prices of securities may follow random patterns and may not be predictable with any reliable degree of accuracy.

Technical Analysis - involves studying past price patterns, trends and interrelationships in the financial markets to assess risk-adjusted performance and predict the direction of both the overall market and specific securities.

> **Risk:** The risk of market timing based on technical analysis is that our analysis may not accurately detect anomalies or predict future price movements. Current prices of securities may reflect all information known about the security and day-to-day changes in market prices of securities may follow random patterns and may not be predictable with any reliable degree of accuracy.

Fundamental Analysis - involves analyzing individual companies and their industry groups, such as a company's financial statements, details regarding the company's product line, the experience and expertise of the company's management, and the outlook for the company and its industry. The resulting data is used to measure the true value of the company's stock compared to the current market value.

> **Risk:** The risk of fundamental analysis is that information obtained may be incorrect and the analysis may not provide an accurate estimate of earnings, which may be the basis for a stock's value. If securities prices adjust rapidly to new information, utilizing fundamental analysis may not result in favorable performance.

Cyclical Analysis - a type of technical analysis that involves evaluating recurring price patterns and trends. Economic/business cycles may not be predictable and may have many fluctuations between long-term expansions and contractions.

Risk: The lengths of economic cycles may be difficult to predict with accuracy and therefore the risk of cyclical analysis is the difficulty in predicting economic trends and consequently the changing value of securities that would be affected by these changing trends.

Modern Portfolio Theory - a theory of investment which attempts to maximize portfolio expected return for a given amount of portfolio risk, or equivalently minimize risk for a given level of expected return, by carefully diversifying the proportions of various assets.

Risk: Market risk is that part of a security's risk that is common to all securities of the same general class (stocks and bonds) and thus cannot be eliminated by diversification.

Long-Term Purchases - securities purchased with the expectation that the value of those securities will grow over a relatively long period of time, generally greater than one year.

Risk: Using a long-term purchase strategy generally assumes the financial markets will go up in the long-term which may not be the case. There is also the risk that the segment of the market that you are invested in or perhaps just your particular investment will go down over time even if the overall financial markets advance. Purchasing investments long-term may create an opportunity cost - "locking-up" assets that may be better utilized in the short-term in other investments.

Short-Term Purchases - securities purchased with the expectation that they will be sold within a relatively short period of time, generally less than one year, to take advantage of the securities' short-term price fluctuations.

Risk: Using a short-term purchase strategy generally assumes that we can predict how financial markets will perform in the short-term which may be very difficult and will incur a disproportionately higher amount of transaction costs compared to long-term trading. There are many factors that can affect financial market performance in the short-term (such as short-term interest rate changes, cyclical earnings announcements, etc.) but may have a smaller impact over longer periods of times.

Short Sales - Unlike a straightforward investment in stocks where you buy shares with the expectation that their price will increase so you can sell at a profit, in a "short sale" you borrow stocks from your brokerage firm and sell them immediately, hoping to buy them later at a lower price. Thus, a short seller hopes that the price of a stock will go down in the near future. A short seller thus uses declines in the market to his advantage. The short seller makes money when the stock prices fall and loses when prices go up. The SEC has strict regulations in place regarding short selling.

Risk: Short selling is very risky. Investors should exercise extreme caution before short selling is implemented. A short seller will profit if the stock goes down in price, but if the price of the shares increase, the potential losses are unlimited because the stock can keep rising forever. There is no ceiling on how much a short seller can lose in a trade. The share price may keep going up and the short seller will have to pay whatever the prevailing stock price is to buy back the shares. However, gains have a ceiling level because the stock price cannot fall below zero.

Risks: A short seller has to undertake to pay the earnings on the borrowed securities as long as the short seller chooses to keep the short position open. If the company declares huge dividends or issues bonus shares, the short seller will have to pay that amount to the lender. Any such occurrence can skew the entire short investment and make it unprofitable. The broker can use the funds in the short seller's margin account to buy back the loaned shares or issue a "call away" to

get the short seller to return the borrowed securities. If the broker makes this call when the stock price is much higher than the price at the time of the short sale, then the investor can end up taking huge losses.

Risk: Margin interest can be a significant expense. Since short sales can only be undertaken in margin accounts, the interest payable on short trades can be substantial, especially if short positions are kept open over an extended period.

Risk: Shares that are difficult to borrow - because of high short interest, limited float, or any other reason - have "hard-to-borrow" fees. These fees are based on an annualized rate that can range from a small fraction of a percent to more than 100% of the value of the short trade. The hard-to-borrow rate can fluctuate substantially on a daily basis; therefore, the exact dollar amount of the fee may not be known in advance, and may be substantial.

Margin Transactions - a securities transaction in which an investor borrows money to purchase a security, in which case the security serves as collateral on the loan.

Risk: If the value of the shares drops sufficiently, the investor will be required to either deposit more cash into the account or sell a portion of the stock in order to maintain the margin requirements of the account. This is known as a "margin call." An investor's overall risk includes the amount of money invested plus the amount that was loaned to them.

Option Writing - a securities transaction that involves selling an option. An option is a contract that gives the buyer the right, but not the obligation, to buy or sell a particular security at a specified price on or before the expiration date of the option. When an investor sells a call option, he or she must deliver to the buyer a specified number of shares if the buyer exercises the option. When an investor sells a put option, he or she must pay the strike price per share if the buyer exercises the option, and will receive the specified number of shares. The option writer/seller receives a premium (the market price of the option at a particular time) in exchange for writing the option.

Risk: Options are complex investments and can be very risky, especially if the investor does not own the underlying stock. In certain situations, an investor's risk can be unlimited.

Trading - We may use frequent trading (in general, selling securities within 30 days of purchasing the same securities) as an investment strategy when managing your account(s). Frequent trading is not a fundamental part of our overall investment strategy, but we may use this strategy occasionally when we determine that it is suitable given your stated investment objectives and tolerance for risk. This may include buying and selling securities frequently in an effort to capture significant market gains and avoid significant losses.

Risk: When a frequent trading policy is in effect, there is a risk that investment performance within your account may be negatively affected, particularly through increased brokerage and other transactional costs and taxes.

Our investment strategies and advice may vary depending upon each client's specific financial situation. As such, we determine investments and allocations based upon your predefined objectives, risk tolerance, time horizon, financial information, liquidity needs and other various suitability factors. Your restrictions and guidelines may affect the composition of your portfolio. **It is important that you notify us immediately with respect to any material changes to your financial circumstances, including for example, a change in your current or expected income level, tax circumstances, or employment status.**

Cash Management
In managing the cash maintained in your account, we utilize the sole exclusive cash vehicle (money market) made available by the custodian. There may be other cash management options away from the custodian available to you with higher yields or safer underlying investments.

Tax Considerations
Our strategies and investments may have unique and significant tax implications. However, unless we specifically agree otherwise, and in writing, tax efficiency is not our primary consideration in the management of your assets. Regardless of your account size or any other factors, we strongly recommend that you consult with a tax professional regarding the investing of your assets.

Custodians and broker-dealers must report the cost basis of equities acquired in client accounts. Your custodian will default to the First-In First-Out ("FIFO") accounting method for calculating the cost basis of your investments. You are responsible for contacting your tax advisor to determine if this accounting method is the right choice for you. If your tax advisor believes another accounting method is more advantageous, provide written notice to our firm immediately and we will alert your account custodian of your individually selected accounting method. Decisions about cost basis accounting methods will need to be made before trades settle, as the cost basis method cannot be changed after settlement.

Risk of Loss
Investing in securities involves risk of loss that you should be prepared to bear. We do not represent or guarantee that our services or methods of analysis can or will predict future results, successfully identify market tops or bottoms, or insulate clients from losses due to market corrections or declines. We cannot offer any guarantees or promises that your financial goals and objectives will be met. Past performance is in no way an indication of future performance.

Other Risk Considerations
When evaluating risk, financial loss may be viewed differently by each client and may depend on many different risks, each of which may affect the probability and magnitude of any potential losses. The following risks may not be all-inclusive, but should be considered carefully by a prospective client before retaining our services.

Liquidity Risk: The risk of being unable to sell your investment at a fair price at a given time due to high volatility or lack of active liquid markets. You may receive a lower price or it may not be possible to sell the investment at all.

Credit Risk: Credit risk typically applies to debt investments such as corporate, municipal, and sovereign fixed income or bonds. A bond issuing entity can experience a credit event that could impair or erase the value of an issuer's securities held by a client.

Inflation and Interest Rate Risk: Security prices and portfolio returns will likely vary in response to changes in inflation and interest rates. Inflation causes the value of future dollars to be worth less and may reduce the purchasing power of a client's future interest payments and principal. Inflation also generally leads to higher interest rates which may cause the value of many types of fixed income investments to decline.

Horizon and Longevity Risk: The risk that your investment horizon is shortened because of an unforeseen event, for example, the loss of your job. This may force you to sell investments that you were expecting to hold for the long term. If you must sell at a time that the markets are down, you may lose money. Longevity Risk is the risk of outliving your savings. This risk is particularly relevant for people who are retired, or are nearing retirement.

Recommendation of Particular Types of Securities
We recommend various types of securities and we do not primarily recommend one particular type of security over another since each client has different needs and different tolerance for risk. Each type of security has its own unique set of risks associated with it and it would not be possible to list here all of the specific risks of every type of investment. Even within the same type of investment, risks can vary widely. However, in very general terms, the higher the anticipated return of an investment, the higher the risk of loss associated with the investment. A description of the types of securities we may recommend to you and some of their inherent risks are provided below.

Money Market Funds: A money market fund is technically a security. The fund managers attempt to keep the share price constant at $1/share. However, there is no guarantee that the share price will stay at $1/share. If the share price goes down, you can lose some or all of your principal. The U.S. Securities and Exchange Commission ("SEC") notes that "While investor losses in money market funds have been rare, they are possible." In return for this risk, you should earn a greater return on your cash than you would expect from a Federal Deposit Insurance Corporation ("FDIC") insured savings account (money market funds are not FDIC insured). Next, money market fund rates are variable. In other words, you do not know how much you will earn on your investment next month. The rate could go up or go down. If it goes up, that may result in a positive outcome. However, if it goes down and you earn less than you expected to earn, you may end up needing more cash. A final risk you are taking with money market funds has to do with inflation. Because money market funds are considered to be safer than other investments like stocks, long-term average returns on money market funds tends to be less than long term average returns on riskier investments. Over long periods of time, inflation can eat away at your returns.

Certificates of Deposit: Certificates of deposit ("CD") are generally a safe type of investment since they are insured by the Federal Deposit Insurance Company ("FDIC") up to a certain amount. However, because the returns are generally low, there is risk that inflation outpaces the return of the CD. Certain CDs are traded in the market place and not purchased directly from a banking institution. In addition to trading risk, when CDs are purchased at a premium, the premium is not covered by the FDIC.

Municipal Securities: Municipal securities, while generally thought of as safe, can have significant risks associated with them including, but not limited to: the credit worthiness of the governmental entity that issues the bond; the stability of the revenue stream that is used to pay the interest to the bondholders; when the bond is due to mature; and, whether or not the bond can be "called" prior to maturity. When a bond is called, it may not be possible to replace it with a bond of equal character paying the same amount of interest or yield to maturity.

Bonds: Corporate debt securities (or "bonds") are typically safer investments than equity securities, but their risk can also vary widely based on: the financial health of the issuer; the risk that the issuer might default; when the bond is set to mature; and, whether or not the bond can be "called" prior to maturity. When a bond is called, it may not be possible to replace it with a bond of equal character paying the same rate of return.

Stocks: There are numerous ways of measuring the risk of equity securities (also known simply as "equities" or "stock"). In very broad terms, the value of a stock depends on the financial health of the company issuing it. However, stock prices can be affected by many other factors including, but not limited to the class of stock (for example, preferred or common); the health of the market sector of the issuing company; and, the overall health of the economy. In general, larger, better established companies ("large cap") tend to be safer than smaller start-up companies ("small cap") are but the mere size of an issuer is not, by itself, an indicator of the safety of the investment.

Mutual Funds and Exchange Traded Funds: Mutual funds and exchange traded funds ("ETF") are professionally managed collective investment systems that pool money from many investors and invest in stocks, bonds, short-term money market instruments, other mutual funds, other securities, or any combination thereof. The fund will have a manager that trades the fund's investments in accordance with the fund's investment objective. While mutual funds and ETFs generally provide diversification, risks can be significantly increased if the fund is concentrated in a particular sector of the market, primarily invests in small cap or speculative companies, uses leverage (i.e., borrows money) to a significant degree, or concentrates in a particular type of security (i.e., equities) rather than balancing the fund with different types of securities. ETFs differ from mutual funds since they can be bought and sold throughout the day like stock and their price can fluctuate throughout the day. The returns on mutual funds and ETFs can be reduced by the costs to manage the funds. Also, while some mutual funds are "no load" and charge no fee to buy into, or sell out of, the fund, other types of mutual funds do charge such fees which can also reduce returns. Mutual funds can also be "closed end" or "open end". So-called "open end" mutual funds continue to allow in new investors indefinitely whereas "closed end" funds have a fixed number of shares to sell which can limit their availability to new investors.

ETFs may have tracking error risks. For example, the ETF investment adviser may not be able to cause the ETF's performance to match that of its Underlying Index or other benchmark, which may negatively affect the ETF's performance. In addition, for leveraged and inverse ETFs that seek to track the performance of their Underlying Indices or benchmarks on a daily basis, mathematical compounding may prevent the ETF from correlating with performance of its benchmark. In addition, an ETF may not have investment exposure to all of the securities included in its Underlying Index, or its weighting of investment exposure to such securities may vary from that of the Underlying Index. Some ETFs may invest in securities or financial instruments that are not included in the Underlying Index, but which are expected to yield similar performance.

Leveraged Exchange Traded Funds:
Leveraged Exchange Traded Funds ("Leveraged ETFs" or "L-ETF") seeks investment results for a single day only, not for longer periods. A "single day" is measured from the time the L-ETF calculates its net asset value ("NAV") to the time of the L-ETF's next NAV calculation. The return of the L-ETF for periods longer than a single day will be the result of each day's returns compounded over the period, which will very likely differ from multiplying the return by the stated leverage for that period. For periods longer than a single day, the L-ETF will lose money when the level of the Index is flat, and it is possible that the L-ETF will lose money even if the level of the Index rises. Longer holding periods, higher index volatility and greater leverage both exacerbate the impact of compounding on an investor's returns. During periods of higher Index volatility, the volatility of the Index may affect the L-ETF's return as much as or more than the return of the Index. Leveraged ETFs are different from most exchange-traded funds in that they seek leveraged returns relative to the applicable index and only on a daily basis. The L-ETF also is riskier than similarly benchmarked exchange-traded funds that do not use leverage. Accordingly, the L-ETF may not be suitable for all investors and should be used only by knowledgeable investors who understand the potential consequences of seeking daily leveraged investment results.

> **Leveraged ETF Leveraged Risk:** The L-ETF obtains investment exposure in excess of its assets in seeking to achieve its investment objective — a form of leverage — and will lose more money in market environments adverse to its daily objective than a similar fund that does not employ such leverage. The use of such leverage could result in the total loss of an investor's investment. For example: a 2X fund will have a multiplier of two times (2x) the Index. A single day movement in the Index approaching 50% at any point in the day could result in the total loss of a shareholder's investment if that movement is contrary to the investment objective of the L-ETF, even if the Index

subsequently moves in an opposite direction, eliminating all or a portion of the earlier movement. This would be the case with any such single day movements in the Index, even if the Index maintains a level greater than zero at all times.

Leveraged ETF Compounding Risk: Compounding affects all investments, but has a more significant impact on a leveraged fund. Particularly during periods of higher Index volatility, compounding will cause results for periods longer than a single day to vary from the stated multiplier of the return of the Index. This effect becomes more pronounced as volatility increases.

Leveraged ETF Use of Derivatives: The L-ETF obtains investment exposure through derivatives. Investing in derivatives may be considered aggressive and may expose the L-ETF to greater risks than investing directly in the reference asset(s) underlying those derivatives. These risks include counterparty risk, liquidity risk and increased correlation risk (each as discussed below). When the L-ETF uses derivatives, there may be imperfect correlation between the value of the reference asset(s) and the derivative, which may prevent the L-ETF from achieving its investment objective. Because derivatives often require only a limited initial investment, the use of derivatives also may expose the L-ETF to losses in excess of those amounts initially invested. The L-ETF may use a combination of swaps on the Index and swaps on an ETF that is designed to track the performance of the Index. The performance of an ETF may not track the performance of the Index due to embedded costs and other factors. Thus, to the extent the L-ETF invests in swaps that use an ETF as the reference asset, the L-ETF may be subject to greater correlation risk and may not achieve as high a degree of correlation with the Index as it would if the L-ETF only used swaps on the Index. Moreover, with respect to the use of swap agreements, if the Index has a dramatic intraday move that causes a material decline in the L-ETF's net assets, the terms of a swap agreement between the L-ETF and its counterparty may permit the counterparty to immediately close out the transaction with the L-ETF. In that event, the L-ETF may be unable to enter into another swap agreement or invest in other derivatives to achieve the desired exposure consistent with the L-ETF's investment objective. This, in turn, may prevent the L-ETF from achieving its investment objective, even if the Index reverses all or a portion of its intraday move by the end of the day. Any costs associated with using derivatives will also have the effect of lowering the L-ETF's return.

Commercial Paper: Commercial paper ("CP") is, in most cases, an unsecured promissory note that is issued with a maturity of 270 days or less. Being unsecured the risk to the investor is that the issuer may default. There is less risk in asset based commercial paper (ABCP). The difference between ABCP and CP is that instead of being an unsecured promissory note representing an obligation of the issuing company, ABCP is backed by securities. Therefore, the perceived quality of the ABCP depends on the underlying securities.

Variable Annuities: A variable annuity is a form of insurance where the seller or issuer (typically an insurance company) makes a series of future payments to a buyer (annuitant) in exchange for the immediate payment of a lump sum (single-payment annuity) or a series of regular payments (regular-payment annuity). The payment stream from the issuer to the annuitant has an unknown duration based principally upon the date of death of the annuitant. At this point, the contract will terminate and the remainder of the funds accumulated forfeited unless there are other annuitants or beneficiaries in the contract. Annuities can be purchased to provide an income during retirement. Unlike fixed annuities that make payments in fixed amounts or in amounts that increase by a fixed percentage, variable annuities, pay amounts that vary according to the performance of a specified set of investments, typically bond and equity mutual funds. Many variable annuities typically impose asset-based sales charges or surrender charges for withdrawals within a specified period. Variable annuities may impose a variety of fees and expenses, in addition to sales and surrender charges, such as mortality and expense risk charges; administrative fees; underlying fund expenses; and charges for special features,

all of which can reduce the return. Earnings in a variable annuity do not provide all the tax advantages of 401(k)s and other before-tax retirement plans. Once the investor starts withdrawing money from their variable annuity, earnings are taxed at the ordinary income rate, rather than at the lower capital gains rates applied to other non-tax-deferred vehicles which are held for more than one year. Proceeds of most variable annuities do not receive a "step-up" in cost basis when the owner dies like stocks, bonds and mutual funds do. Some variable annuities offer "bonus credits." These are usually not free. In order to fund them, insurance companies typically impose mortality and expense charges and surrender charge periods. In an exchange of an existing annuity for a new annuity (so-called 1035 exchanges), the new variable annuity may have a lower contract value and a smaller death benefit; may impose new surrender charges or increase the period of time for which the surrender charge applies; may have higher annual fees; and provide another commission for the broker.

Real Estate: Real estate is increasingly being used as part of a long-term core strategy due to increased market efficiency and increasing concerns about the future long-term variability of stock and bond returns. In fact, real estate is known for its ability to serve as a portfolio diversifier and inflation hedge. However, the asset class still bears a considerable amount of market risk. Real estate has shown itself to be very cyclical, somewhat mirroring the ups and downs of the overall economy. In addition to employment and demographic changes, real estate is also influenced by changes in interest rates and the credit markets, which affect the demand and supply of capital and thus real estate values. Along with changes in market fundamentals, investors wishing to add real estate as part of their core investment portfolios need to look for property concentrations by area or by property type. Because property returns are directly affected by local market basics, real estate portfolios that are too heavily concentrated in one area or property type can lose their risk mitigation attributes and bear additional risk by being too influenced by local or sector market changes.

Real Estate Investment Trust: A real estate investment trust ("REIT") is a corporate entity which invests in real estate and/or engages in real estate financing. A REIT reduces or eliminates corporate income taxes. REITs can be publicly or privately held. Public REITs may be listed on public stock exchanges. REITs are required to declare 90% of their taxable income as dividends, but they actually pay dividends out of funds from operations, so cash flow has to be strong or the REIT must either dip into reserves, borrow to pay dividends, or distribute them in stock (which causes dilution). After 2012, the IRS stopped permitting stock dividends. Most REITs must refinance or erase large balloon debts periodically. The credit markets are no longer frozen, but banks are demanding, and getting, harsher terms to re-extend REIT debt. Some REITs may be forced to make secondary stock offerings to repay debt, which will lead to additional dilution of the stockholders. Fluctuations in the real estate market can affect the REIT's value and dividends.

Options Contracts: Options are complex securities that involve risks and are not suitable for everyone. Option trading can be speculative in nature and carry substantial risk of loss. It is generally recommended that you only invest in options with risk capital. An option is a contract that gives the buyer the right, but not the obligation, to buy or sell an underlying asset at a specific price on or before a certain date (the "expiration date"). The two types of options are calls and puts:

A call gives the holder the right to buy an asset at a certain price within a specific period of time. Calls are similar to having a long position on a stock. Buyers of calls hope that the stock will increase substantially before the option expires.

A put gives the holder the right to sell an asset at a certain price within a specific period of time. Puts are very similar to having a short position on a stock. Buyers of puts hope that the price of the stock will fall before the option expires.

Selling options is more complicated and can be even riskier.

Item 9 Disciplinary Information

We are required to disclose the facts of any legal or disciplinary events that are material to a client's evaluation of our advisory business or the integrity of our management. We do not have any required disclosures under this item.

Item 10 Other Financial Industry Activities and Affiliations

We do not have other financial industry activities or affiliations to disclose.

Item 11 Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Description of Our Code of Ethics
We strive to comply with applicable laws and regulations governing our practices. Therefore, our Code of Ethics includes guidelines for professional standards of conduct for persons associated with our firm. Our goal is to protect your interests at all times and to demonstrate our commitment to our fiduciary duties of honesty, good faith, and fair dealing with you. All persons associated with our firm are expected to adhere strictly to these guidelines. Persons associated with our firm are also required to report any violations of our Code of Ethics. Additionally, we maintain and enforce written policies reasonably designed to prevent the misuse or dissemination of material, non-public information about you or your account holdings by persons associated with our firm.

Clients or prospective clients may obtain a copy of our Code of Ethics by contacting us at the telephone number on the cover page of this brochure.

Participation or Interest in Client Transactions
Neither our firm nor any persons associated with our firm has any material financial interest in client transactions beyond the provision of investment advisory services as disclosed in this brochure.

Personal Trading Practices
Our firm or persons associated may invest in the same securities that we recommend to you. We may also recommend securities to you or buy or sell securities for your account at or about the same time that our firm or an associated persons buys or sells the same securities of their account. A conflict of interest exists in such cases because we have the ability to trade ahead of you and potentially receive more favorable prices than you will receive. To mitigate this conflict of interest, it is our policy that neither our firm nor persons associated with our firm shall have priority over your account in the purchase or sale of securities.

Item 12 Brokerage Practices

We recommend the brokerage and custodial services of Charles Schwab ("Custodian" or "Charles Schwab"). Your assets must be maintained in an account at a "qualified custodian," generally a broker-dealer or bank. In recognition of the value of the services the Custodian provides, you may pay higher commissions and/or trading costs than those that may be available elsewhere. Our selection of custodian is based on many factors, including the level of services provided, the custodian's financial stability, and the cost of services provided by the custodian to our clients, which includes the yield on cash sweep choices, commissions, custody fees and other fees or expenses.

We seek to recommend a custodian/broker that will hold your assets and execute transactions on terms that are, overall, the most favorable compared to other available providers and their services. We consider various factors, including:

- Capability to buy and sell securities for your account itself or to facilitate such services.
- The likelihood that your trades will be executed.
- Availability of investment research and tools.
- Overall quality of services.
- Competitiveness of price.
- Reputation, financial strength, and stability.
- Existing relationship with our firm and our other clients.

Research and Other Soft Dollar Benefits
We do not have any soft dollar arrangements.

Economic Benefits
Charles Schwab **Institutional**
We participate in the institutional adviser program (the "Program") offered by Charles Schwab Institutional. Charles Schwab Institutional is a division of Charles Schwab Inc., member FINRA/SIPC (" Charles Schwab "), an unaffiliated SEC-registered broker-dealer and FINRA member. Charles Schwab offers to independent investment advisers services which include custody of securities, trade execution, clearance and settlement of transactions. We receive some benefits from Charles Schwab through our participation in the Program.

As disclosed above, we participate in Charles Schwab's institutional customer program and we may recommend Charles Schwab to you for custody and brokerage services. There is no direct link between our participation in the Program and the investment advice we give you, although we receive economic benefits through our participation in the Program that are typically not available to Charles Schwab retail investors. These benefits include the following products and services (provided without cost or at a discount): receipt of duplicate Client statements and confirmations; research related products and tools; consulting services; access to a trading desk serving our participants; access to aggregated trading (which provides the ability to aggregate securities transactions for execution and then allocate the appropriate shares to your accounts); the ability to have advisory fees deducted directly from your accounts; access to an electronic communications network for order entry and account information; access to mutual funds with no transaction fees and to certain institutional money managers; and discounts on compliance, marketing, research, technology, and practice management products or services provided to us by third party vendors. Charles Schwab may also have paid for business consulting and professional services received by our related persons. Some of the products and services made available by Charles Schwab through the Program may benefit us but may not benefit your accounts. These products or services may assist us in managing and administering your accounts, including accounts not maintained at Charles Schwab. Other services made available by Charles Schwab are intended to help us manage and further develop our business enterprise. The benefits received by us or our personnel through participation in the Program do not depend on the amount of brokerage transactions directed to Charles Schwab. As part of our fiduciary duties to you, we endeavor at all times to put your interests first. You should be aware, however, that the receipt of economic benefits by us or our related persons in and of itself creates a potential conflict of interest and may indirectly influence our choice of Charles Schwab for custody and brokerage services.

Brokerage for Client Referrals
We do not receive client referrals from broker-dealers in exchange for cash or other compensation, such as brokerage services or research.

Directed Brokerage
We routinely require that you direct our firm to execute transactions through Charles Schwab. As such, we may be unable to achieve the most favorable execution of your transactions and you may pay higher brokerage commissions than you might otherwise pay through another broker-dealer that offers the same types of services. Not all advisers require their clients to direct brokerage.

Aggregated Trades
We combine multiple orders for shares of the same securities purchased for discretionary advisory accounts we manage (this practice is commonly referred to as "aggregated trading"). We will then distribute a portion of the shares to participating accounts in a fair and equitable manner. Generally, participating accounts will pay a fixed transaction cost regardless of the number of shares transacted. In certain cases, each participating account pays an average price per share for all transactions and pays a proportionate share of all transaction costs on any given day. In the event an order is only partially filled, the shares will be allocated to participating accounts in a fair and equitable manner, typically in proportion to the size of each client's order. Accounts owned by our firm or persons associated with our firm may participate in aggregated trading with your accounts; however, they will not be given preferential treatment.

We do not place trades on behalf of the selected Strategists. You should consult their Form ADV, Part 2A or Appendix 1 for their policies on aggregated trading.

Fees for Additional Services
The fees discussed above do not cover certain charges associated with securities transactions in clients' accounts, including: (a) dealer markups, markdowns or spreads charged on transactions in over the counter securities; (b) costs relating to trading in certain foreign securities; (c) the internal charges and fees that may be imposed by any funds, (such as fund operating expenses, management fees, redemption fees, 12b-1 fees and other fees and expenses); (d) brokerage commissions or other charges imposed by broker dealers or entities other than the custodian if and when trades are cleared by another broker dealer; and (e) the charge to carry tax lot information on transferred mutual funds or other investment vehicles, postage and handling charges, returned check charges, transfer taxes; stock exchange fees or other fees mandated by law. Further information regarding charges and fees assessed by funds may be found in the appropriate prospectus or offering document.

Mutual Fund Share Classes
Mutual funds are sold with different share classes, which carry different cost structures. Each available share class is described in the mutual fund's prospectus. When we purchase, or recommend the purchase of, mutual funds for a client, we select the share class that is deemed to be in the client's best interest, taking into consideration cost, tax implications, and other factors. When the fund is available for purchase at net asset value, we will purchase, or recommend the purchase of, the fund at net asset value. We also review the mutual funds held in accounts that come under our management to determine whether a more beneficial share class is available, considering cost, tax implications, and the impact of contingent deferred sales charges.

Item 13 Review of Accounts

Benny A. Ynfante, CEO/CCO will monitor your accounts on an ongoing basis and will conduct account reviews at least annually, to ensure the advisory services provided to you are consistent with your investment needs and objectives. Additional reviews may be conducted based on various circumstances, including, but not limited to:

- contributions and withdrawals;
- year-end tax planning;

- market moving events;
- security specific events; and/or
- changes in your risk/return objectives.

We will provide you with additional or regular written reports in conjunction with account reviews. Reports we provide to you will contain relevant account and/or market-related information such as an inventory of account holdings and account performance, etc. You will receive trade confirmations and monthly or quarterly statements from your account custodian.

Benny A. Ynfante, CEO/CCO will review financial plans as needed, depending on the arrangements made with you at the inception of your advisory relationship to ensure that the advice provided is consistent with your investment needs and objectives. Generally, we will contact you periodically to determine whether any updates may be needed based on changes in your circumstances. Changed circumstances may include, but are not limited to marriage, divorce, birth, death, inheritance, lawsuit, retirement, job loss and/or disability, among others. We recommend meeting with you at least annually to review and update your plan if needed. Additional reviews will be conducted upon your request. Such reviews and updates may be subject to our then current hourly rate. Written updates to the financial plan will be provided in conjunction with the review. If you implement financial planning advice, you will receive trade confirmations and monthly or quarterly statements from relevant custodians.

Item 14 Client Referrals and Other Compensation

As disclosed under the *Fees and Compensation* section in this brochure, persons providing investment advice on behalf of our firm are licensed insurance agents. For information on the conflicts of interest this presents, and how we address these conflicts, refer to the *Fees and Compensation* section.

We do not receive any compensation from any third party in connection with providing investment advice to you nor do we compensate any individual or firm for client referrals.

Refer to the *Brokerage Practices* section above for disclosures on research and other benefits we may receive resulting from our relationship with your account custodian.

Item 15 Custody

Your independent custodian will directly debit your account(s) for the payment of our advisory fees when you have agreed to allow us to do so. This ability to deduct our advisory fees from your accounts causes our firm to exercise limited custody over your funds or securities. We do not have physical custody of any of your funds and/or securities. Your funds and securities will be held with a bank, broker-dealer, or other qualified custodian. You will receive account statements from the qualified custodian(s) holding your funds and securities at least quarterly. The account statements from your custodian(s) will indicate the amount of our advisory fees deducted from your account(s) each billing period. You should carefully review account statements for accuracy.

We will also provide statements to you reflecting the amount of the advisory fee deducted from your account. You should compare our statements with the statements from your account custodian(s) to reconcile the information reflected on each statement. If you have a question regarding your account statement, or if you did not receive a statement from your custodian, contact us immediately at the telephone number on the cover page of this brochure.

Item 16 Investment Discretion

Before we can buy or sell securities on your behalf, you must first sign our discretionary management agreement and the appropriate trading authorization forms required by Orion and/or the Strategist Manager(s).

You may grant our firm discretion over the selection and amount of securities to be purchased or sold for your account(s) without obtaining your consent or approval prior to each transaction. You may specify investment objectives, guidelines, and/or impose certain conditions or investment parameters for your account(s). For example, you may specify that the investment in any particular stock or industry should not exceed specified percentages of the value of the portfolio and/or restrictions or prohibitions of transactions in the securities of a specific industry or security. Refer to the *Advisory Business* section in this brochure for more information on our discretionary management services.

Item 17 Voting Client Securities

We will not vote proxies on behalf of your advisory accounts. At your request, we may offer you advice regarding corporate actions and the exercise of your proxy voting rights. If you own shares of applicable securities, you are responsible for exercising your right to vote as a shareholder.

In most cases, you will receive proxy materials directly from the account custodian. However, in the event we were to receive any written or electronic proxy materials, we would forward them directly to you by mail, unless you have authorized our firm to contact you by electronic mail, in which case, we would forward any electronic solicitations to vote proxies.

Item 18 Financial Information

Our firm does not have any financial condition or impairment that would prevent us from meeting our contractual commitments to you. We do not take physical custody of client funds or securities, or serve as trustee or signatory for client accounts, and, we do not require the prepayment of more than $500 in fees six or more months in advance. Therefore, we are not required to include a financial statement with this brochure.

We have not filed a bankruptcy petition at any time in the past ten years.

Item 19 Requirements for State-Registered Advisers

Refer to the Part(s) 2B for background information about our principal executive officers, management personnel and those giving advice on behalf of our firm.

Our firm is not actively engaged in any business other than giving investment advice that is not already disclosed above.

Neither our firm, nor any persons associated with our firm are compensated for advisory services with performance-based fees. Refer to the *Performance-Based Fees and Side-By-Side Management* section above for additional information on this topic.

Neither our firm, nor any of our management persons have any reportable arbitration claims, civil, self-regulatory organization proceedings, or administrative proceedings.

Neither our firm, nor any of our management persons have a material relationship or arrangement with any issuer of securities.

Item 20 Additional Information

Trade Errors
In the event a trading error occurs in your account, our policy is to restore your account to the position it should have been in had the trading error not occurred. Depending on the circumstances, corrective actions may include canceling the trade, adjusting an allocation, and/or reimbursing the account.

Class Action Lawsuits
We do not determine if securities held by you are the subject of a class action lawsuit or whether you are eligible to participate in class action settlements or litigation nor do we initiate or participate in litigation to recover damages on your behalf for injuries as a result of actions, misconduct, or negligence by issuers of securities held by you.

Benny A. Ynfante

Rook Strategies Wealth Management, PLLC

3605 Lake Champagne
Robstown, TX 78380

Telephone: 1-888-806-ROOK

October 1, 2021

FORM ADV PART 2B
BROCHURE SUPPLEMENT

This brochure supplement provides information about Benny A. Ynfante that supplements the Rook Strategies Wealth Management, PLLC brochure. You should have received a copy of that brochure. Contact us at 1-888-806-ROOK if you did not receive Rook Strategies Wealth Management, PLLC's brochure or if you have any questions about the contents of this supplement.

Additional information about Benny A. Ynfante (CRD # 5627732) is available on the SEC's website at www.adviserinfo.sec.gov.

Item 2 Educational Background and Business Experience

Benny A. Ynfante
Year of Birth: 1986
Formal Education After High School:

- Del Mar College, attended from 8/2005 - 12/2006

Business Background:

- Rook Strategies Wealth Management, PLLC, CCO and CEO, 8/2021 - Present
- Mutual of Omaha Investor Services, Investment Adviser Representative, 1/2017 - 8/2021
- Mutual of Omaha Insurance Company, District Sales Manager, 3/2014 - 8/2021
- NY Life Securities, Agent, 2/2010 - 3/2014

Item 3 Disciplinary Information

Form ADV Part 2B requires disclosure of certain criminal or civil actions, administrative proceedings, and self-regulatory organization proceedings, as well as certain other proceedings related to suspension or revocation of a professional attainment, designation, or license. Mr. Benny A. Ynfante has no required disclosures under this item.

Item 4 Other Business Activities

Benny A. Ynfante is separately licensed as an independent insurance agent. In this capacity, he can effect transactions in insurance products for his clients and earn commissions for these activities. The fees you pay our firm for advisory services are separate and distinct from the commissions earned by Mr. Ynfante for insurance related activities. This presents a conflict of interest because Mr. Ynfante may have an incentive to recommend insurance products to you for the purpose of generating commissions rather than solely based on your needs. However, you are under no obligation, contractually or otherwise, to purchase insurance products through any person affiliated with our firm.

Item 5 Additional Compensation

Refer to the *Other Business Activities* section above for disclosures on Mr. Ynfante's receipt of additional compensation as a result of his other business activities.

Also, refer to the *Fees and Compensation*, *Client Referrals and Other Compensation, and Other Financial Industry Activities and Affiliations* section(s) of Rook Strategies Wealth Management, PLLC's firm brochure for additional disclosures on this topic.

Item 6 Supervision

As the CCO and CEO of Rook Strategies Wealth Management, PLLC, Benny A. Ynfante supervises the advisory activities of our firm. Benny A. Ynfante can be reached at 1-888-806-ROOK.

Item 7 Requirements for State Registered Advisers

Benny A. Ynfante does not have any reportable arbitration claims, has not been found liable in a reportable civil, self-regulatory organization or administrative proceeding, and has not been the subject of a bankruptcy petition.
